DETAILED ACTION

Response to Amendment

1. This action is in response to the communication filed on August 25, 2003.
2. Claims 19-22 are pending in this action. Claims 19-22 have been amended.
3. The applicant's arguments with respect to claims 19-22 have been fully considered but they are not deemed to be persuasive. For examiner's response to the applicant's arguments or comments, see the detailed discussion in the Response to the Arguments section.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 19-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kondo (US 5,867,815) in view of Applicant's admitted prior art.

As per claim 19, Kondo teaches, "a speech decoding apparatus, wherein the speech decoding apparatus receives a coded speech including a gain code and synthesizes a speech", the speech decoding apparatus comprising:

"a gain decoder for inputting the gain code and for decoding a gain of a speech in a concerning decoding period based on the gain code input" (col. 5, lines 21-40, claimed element "gain" reads on "level");

Art Unit: 2654

“a noise level evaluator for evaluating a noise level of the speech in concerning decoding period by using the gain decoded by the gain decoder” (col. 5, lines 21-40);

“an excitation codebook storing time series vectors” (col. 5, lines 22-39, code book contains time series vectors)

“a noise level controller for changing a noise level of time series vectors output from an excitation codebook based on an evaluation result of the noise level evaluator” (col. 5, line 6 to col. 6, line 10).

Kondo does not explicitly teach a CELP decoder. However, Applicant's admitted prior art teaches a CELP decoder (Fig. 7). Therefore it would have been obvious to one of ordinary skill in the art at the time of the invention to use a known CELP decoder so that a known type better quality synthesized speech will be produced.

As per claims 20-22, they are interpreted and thus rejected for the same reasons set forth in the rejection of claim 19.

Response to Arguments

6. The applicant argues: “Kondo does not change “noise level of the time series vectors” as recited in claim 19”.

The examiner disagrees with applicant's assertions because Kondo teaches above features at col. 5, lines 6-40. Here level is not fixed because level is adjusted by the level controller based on the noise level determination.

Conclusion

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
